tomorrow

TANKER RECEIPT — BEFORE DECANT

- ☐ Seals intact · numbers match invoice
- ☐ Dip + density of compartments before decant
- ☐ Tank dip before & after decanting
- ☐ Density @15°C vs invoice ($\pm 3 \text{ kg/m}^3$)
- ☐ Entry made in the same shift

DENSITY SANITY CHECK

- ☐ Hydrometer clean · sample settled
- ☐ Read at eye level · note temperature
- ☐ Convert to 15°C (OMC chart)
- ☐ MS: 720–775 · HSD: 820–860 kg/m^3
- ☐ Off vs invoice? Don't decant — call supplier

VARIANCE TOLERANCE GUIDE

- Within $\pm 0.3\%$ of sales — normal, note & move on
- $0.3\% - 0.6\%$ — watch 3 days · check totalizer vs billing
- Above 0.6% or one-direction trend — escalate: leak / short delivery / meter drift

Daily variance = dip stock – book stock, against the day's sales.

STOCK SHORT? DO THIS

- ☐ Re-dip after 30 min settling
- ☐ Totalizer vs billing
- ☐ Last tanker's net dip gain
- ☐ Density / temperature shift
- ☐ Still short? Record shift & name — watch the pattern

TIRED OF TICKING THESE BY HAND?

**Pumpini ticks every box on this card —
automatically, every shift.**

Fuel, cash, credit — watched 24×7, in your language. 15-day free trial.
